

Oilseeds: World Markets and Trade

South American Soybeans Continue to Gain World Market Share

South American soybean exports continue to gain world import market share while the United States' share is declining. In 1998/99, the United States held the dominant position in the market capturing 56 percent of global imports while South America's market share was 38 percent. For 2003/04, USDA is forecasting that South America's share will jump to nearly 62 percent of global trade, while the United States' share will slip to 36 percent. While the forecast drop in the size of the U.S. crop in 2003/04, the second consecutive year, contributes to this fall, South American exports have experienced a 74-percent increase, rising from 23.8 million tons in 2001/02 to a projected 41.5 million tons in 2003/04. Much of this growth in trade is due to an impressive increase in South American soybean production, up 31 percent since 2001/02. Brazil accounts for most of this growth with production in 2003/04 forecast to reach 60 million tons, nearly twice the level produced just four years ago. Brazilian exports surged 11.6 million tons during this period to a record 26.6 million tons forecast for 2003/04. Argentina has shown impressive growth in production and trade during this period as well, with production up 72 percent and exports up nearly three-fold. Other exporters in South America include Paraguay, Bolivia, Uruguay and Ecuador. World soybean imports are projected to increase 6.2 percent in 2003/04, with China at 23.0 million tons, and the EU with 18.2 million tons representing the leading import markets.

SUMMARY

Projected global oilseed production fell slightly to 344.2 million tons in January, or 0.2 percent from last month's estimate. Declines in production of 725 thousand tons for soybeans and 244 thousand tons for sunflowerseed accounted for most of the change, and more than offset a rise in peanut production of 210 thousand tons. The fall in soybean production is largely attributed to a decline in the U.S. yield to 33.4 bu per acre, the lowest since 1993/94. The decline in sunflowerseed production is mostly due to dry weather in Argentina. The expected increase in peanut production is due mostly to ideal growing conditions in India. Brazilian soybean exports rose by 400 thousand tons, while U.S. exports rose 270 thousand tons. Projected soybean imports by China rose 1 million tons, more than offsetting a fall for the EU of 300 thousand tons, and a decrease of Bolivian imports of 110 thousand tons. The decline in global oilseed production, along with the increase in exports, is leading to tighter ending stocks of major oilseeds.

World oilseed stocks are projected to be much tighter at the end of 2003/04 than they were at the end of 2002/03. The latest projections place 2003/04 ending stocks at 39.8 million tons, 2.8 million tons lower than estimated 2002/03 ending stocks.

Global soybean meal production is expected to rise 143 thousand tons from last month's estimate. Tight domestic supplies of U.S. soybeans caused by lower production and high early season exports have reduced crush and lowered soybean meal export prospects by 226 thousand tons, while imports are expected to rise 123 thousand tons. The EU is expected to raise imports of soybean meal by 300 thousand tons, while Chinese imports of soybean meal should decrease by 150 thousand tons from last month's estimate.

Vegetable oil production is expected to rise 6.4 million tons from last year to 100.7 million tons. Consumption is expected to increase 4.2 million tons to 99.9 million tons. Ending stocks will rise 240 thousand tons to 6.4 million tons. Most of the growth in the production of vegetable oils will be from rapeseed, soybean, peanut and sunflowerseed, up by 1.4 million tons, 1.2 million tons, 548 thousand tons, and 453 thousand tons, respectively.

Notes on World Supply/Demand Tables

- 1) Trade, crush, consumption, and stocks data are aggregated using individual marketing years with the exception of Argentina and Brazil. These two countries are converted to an October-September basis. Marketing years for countries in the Northern Hemisphere begin in the first year shown. Those in the Southern Hemisphere begin in the second year.
- 2) World imports and exports will not balance. This is due to differences in marketing years and time lags between exportation and importation.
- 3) Stocks data are not estimated for all countries.
- 4) Price averages are dollars per bushel for soybeans, dollars per short ton for soybean meal and cents per pound for soybean oil.

Regional area and county designations in the soybean, soybean meal, and soybean oil supply, distribution, and trade tables are as follows:

Asia	Africa, North	Baltic States	Latin America	FSU-12
Bangladesh	Algeria	Estonia	Argentina	Armenia
Burma	Egypt	Latvia	Barbados	Azerbaijan
China	Libya	Lithuania	Bolivia	Byelarus
Cambodia	Morocco		Brazil	Georgia
